

OBJECTIVE

BS Computer Science student with hands-on experience building real world web applications and AI-driven systems. Developed a full stack dairy farm management system currently used in a family business, and an AI Tutor for Personalized Learning Recommendations combining a Rule-Based Engine with a Decision Tree Classifier, demonstrating the ability to identify real problems and deliver practical software and AI solutions. Eager to grow and contribute in a professional internship environment.

EXPERIENCE

Lab Assistant, University of Sindh, Jamshoro

01/2023 – 05/2023 | Jamshoro, Pakistan

- Subject: Introduction to Communication Technology

EDUCATION

BS Computer Science (Pre-Engineering), University of Sindh, Jamshoro

2023 – Present | Jamshoro, Pakistan

- CGPA: 3.45/4

Certified Agentic & Robotic AI Engineer, PIAIC

08/2025 – Present | Karachi, Pakistan

AI Professional, Google

05/2026 – Present | Remote

PROJECTS

VerdexAI — AI-Powered Recruitment Platform

Personal Project | verdexai-official.vercel.app | github.com/mibrahim-O2/verdexai-official | 07/2026

- Designed and built a production-grade full-stack recruitment platform from scratch integrating AI-driven CV parsing, candidate scoring, assessment testing, interview scheduling, and onboarding tracking in a unified role-based system
- Implemented an AI CV parsing pipeline using OpenAI GPT-4o-mini that extracts structured candidate profiles (name, skills array, experience years, education, summary) from uploaded PDF resumes and scores each candidate against job requirements on a 0–100% scale with a written reasoning explanation
- Built an AI assessment engine that auto-generates 10 role-specific MCQ questions per job using OpenAI, delivers timed tests to candidates with tab-switch proctoring, grades submissions, and returns a detailed answer review with explanations
- Engineered a complete hiring pipeline covering job posting, AI-ranked candidate review, test invitation, interview scheduling with automatic Resend API email notifications, hire finalization, and step-by-step onboarding progress tracking
- Developed a three-role access control system (Candidate, HR/Recruiter, Admin) enforced at both the frontend routing level and the backend middleware level using Firebase Admin SDK token verification and role-based Mongoose queries
- Deployed the frontend on Vercel (Next.js 15, React 19, Tailwind CSS 4) and the backend on Railway (Node.js, Express, Mongoose) with MongoDB Atlas as the cloud database, implementing graceful AI failure handling so the platform degrades without breaking

AI Tutor for Personalized Learning Recommendations

AI Lab Project | github.com/mibrahim-O2/AI_Tutor_PLR_AbstractMinds | 06/2026

- Designed and implemented a Streamlit-based AI Tutor that analyzes student quiz performance and generates personalized study recommendations using two parallel AI approaches

MUHAMMAD IBRAHIM

BS Computer Science Student

LANGUAGES

English ●●●●○

CERTIFICATIONS

- Google IT Automation with Python

- Built a Rule-Based Engine using forward-chaining IF-THEN logic with modifier rules for response time, confidence, and score trend analysis
- Trained and tuned a Decision Tree Classifier with scikit-learn (max_depth=4, stratified 80/20 split), achieving approximately 85% accuracy on a held-out test set
- Built a full evaluation pipeline comparing both AI approaches using Accuracy, Precision, Recall, F1-Score, and a Confusion Matrix
- Implemented an explainability module that logs step-by-step reasoning for every prediction, making model decisions fully traceable
- Designed four interactive Plotly visualizations (Bar, Pie, Line, Radar charts) and led architecture, documentation, and team coordination as Project Lead for a 3-member team

Dairy Farm Management System

Personal / Family Business Project | github.com/mibrahim-O2

- Built a full-stack Flask web application to digitize daily billing operations for a family-run dairy farm
- Implemented a real-time bill calculator, bilingual (Urdu/English) interface, and mobile-optimized bill-saving feature using html2canvas
- Currently in active daily use, replacing manual record-keeping for the business

SKILLS

Prompt & Context Engineering

- Designing structured prompts for accurate and context-aware AI outputs

Flask web framework

- routing
- sessions
- decorators

Python

- Building web applications using Flask framework

Git/GitHub for version control

- Version control & branching
- Writing professional README files
- Project documentation

n8n

- Workflow automation
- Basic Agent building

SQL

- Queries & filtering
- Joins & aggregations
- Schema design

Machine Learning (scikit-learn)

- Training and evaluating DecisionTreeClassifier models
- Train/test splitting, stratified sampling
- Computing Accuracy, Precision, Recall, F1-Score, Confusion Matrix

Rule-Based / Symbolic AI

- Designing forward-chaining IF-THEN rule engines
- Building modifier-rule logic for adaptive decision systems

Data Analysis (Pandas & NumPy)

- Data cleaning, preprocessing, and feature encoding
- Synthetic dataset generation for ML training

Streamlit

- Building interactive multi-tab web applications
- Session state management, sidebar controls, dynamic UI

Data Visualization (Plotly)

- Building bar, pie, line, and radar charts

- Interactive dashboards for model evaluation

AI Explainability

- Designing reasoning logs and decision-path tracing
- Translating model output into natural-language explanations

SOFT SKILLS

- Problem Solving: breaking down ambiguous problems into modular, testable components
- Team Leadership: led a 3-member team as Project Lead, assigning tasks and coordinating Git workflow
- Technical Communication: writing clear documentation, README files, and explaining AI decisions in plain language
- Time Management: delivered a complete AI project across 6 structured phases on schedule
- Critical Thinking: comparing multiple AI approaches objectively using measurable evaluation metrics
- Attention to Detail: maintaining consistent code quality, naming conventions, and UI polish across a multi-file project
